PROFESSIONAL SUMMARY

Software developer with a B.Ed in Computer Science Education (University of Benin, 2025). I build and deploy responsive web applications with JavaScript, React and Python, and write smart contracts in Rust. My portfolio includes five live projects: a blockchain certificate verifier, a school registration system, an authenticated task manager and two business websites. Three years of teaching programming have made me a clear communicator who writes readable code, debugs methodically and explains technical decisions to non-technical people.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3, Python, Rust

Frameworks & libraries: React (components, props, state), EmailJS, Firebase

Web3: Smart contracts in Rust, blockchain fundamentals

Tools & deployment: Git & GitHub, VS Code, Netlify, Vercel, GitHub Pages

Data: DBMS concepts, browser LocalStorage

Practices: Responsive and mobile-first design, accessible markup, version control, debugging, code documentation

SELECTED PROJECTS

Educhain: blockchain certificate verification

Rust, Web3, JavaScript

- Built a web app that stores student certificates on a blockchain so they can be verified and cannot be altered.
- Wrote the smart contract in Rust and connected it to a deployed web front end (Vercel).

GOS Register: school registration system

HTML, CSS, JavaScript

- Developed a web app that replaces paper registration with one digital workflow for recording and organizing student information.
- Deployed on Netlify.

Garden of Success School Website

HTML, CSS, JavaScript, EmailJS

- Built a multi-page, mobile-first school site with an admin panel for managing blog posts and the photo gallery.
- Integrated a working contact form with EmailJS and published it on GitHub Pages.

To-Do List App

HTML, CSS, JavaScript, LocalStorage

- Created a task manager with Google, Apple and guest sign-in, priority levels, date filtering and a live statistics dashboard.
- Persisted user data in LocalStorage; deployed on Vercel.

Master Pattern: construction company website

HTML, CSS, JavaScript

- Delivered a responsive corporate site presenting services, past projects and company profile for a construction company.

Source code for these projects: github.com/venvlek

PROFESSIONAL EXPERIENCE

Coding Instructor (Online)

2025 – Present

Rubies Code School, Remote

- Teach HTML, CSS, JavaScript and programming fundamentals to young learners in live Zoom sessions.
- Design the curriculum, exercises and mini projects; review student code and debug it with learners one-on-one.
- Turn complex concepts into small, testable steps and give written and verbal feedback on progress.

ICT & Data Processing Teacher

2023 – 2025

Garden of Success School, Lagos

- Taught web design, graphical and presentation packages and computer maintenance to junior and senior secondary students.
- Introduced programming and web development, and supervised student practical projects.
- Prepared lesson plans, assessments and revision sessions.

EDUCATION

B.Ed, Computer Science Education

2025

University of Benin (UNIBEN)

- Research project: awareness of Artificial Intelligence among senior secondary school students in Mainland Lagos. Designed the questionnaire, collected and analyzed the data, and presented the findings.
